

How To Make An Edible Lace 3D-Wired Flower

Using Crystal Candy's 3D Floral Collection Silicone Mats and New Crystal Lace Signature Blend Icing

Ray Esmany, Crystal Candy, South Africa

1. Tools needed: Crystal Candy silicone mat, Crystal Lace Signature Blend icing, spatula, brush, lustre, stamens, floral wire and tape.

2. Mix NEW! Crystal Lace Signature Blend icing per instructions.

3. Dry brush Crystal Candy's Diamond Lustre into your Crystal Candy silicone mat.

4. Using a spatula, work the mixture into the mat with a touch of pressure.

5. After spreading the mixture into the mat, place a small wire into the centre groove.

6. Allow to dry from 30 mins to overnight. Once dry remove each petal gently from the mat.

7. Bend the stamens in the middle around the florist wire and secure with floral tape.

8. Starting with the smallest petals first, attach one petal at a time to the stamens using the tape.

9. Layer the petals until you form a flower. The more petals you add, the fuller the flower will be.

10. Fold and bend your petals up or down to your desired flower shape.
